Questions :

Secure Coding plays a huge role in preventing these XSS attacks. These cross site scripting attacks can only be used in such websites where scripts can be executed even though they are not meant to. Such websites are vulnerable to XSS. These XSS attacks can be prevented by limiting the few characters usable in the fields, such that no malicious payloads/ scripts can be executed in our websites. Nowadays there are numerous websites which are vulnerable to XSS. By implementing some several restrictions like Character limitation etc, our websites can be secured and will be invulnerable to XSS.

1. Reflected XSS

Querying for my registration number

Result

Sorry, no results were found for
18bce7271
- [Try again.](#)

<a href="https://www.youtu

Search

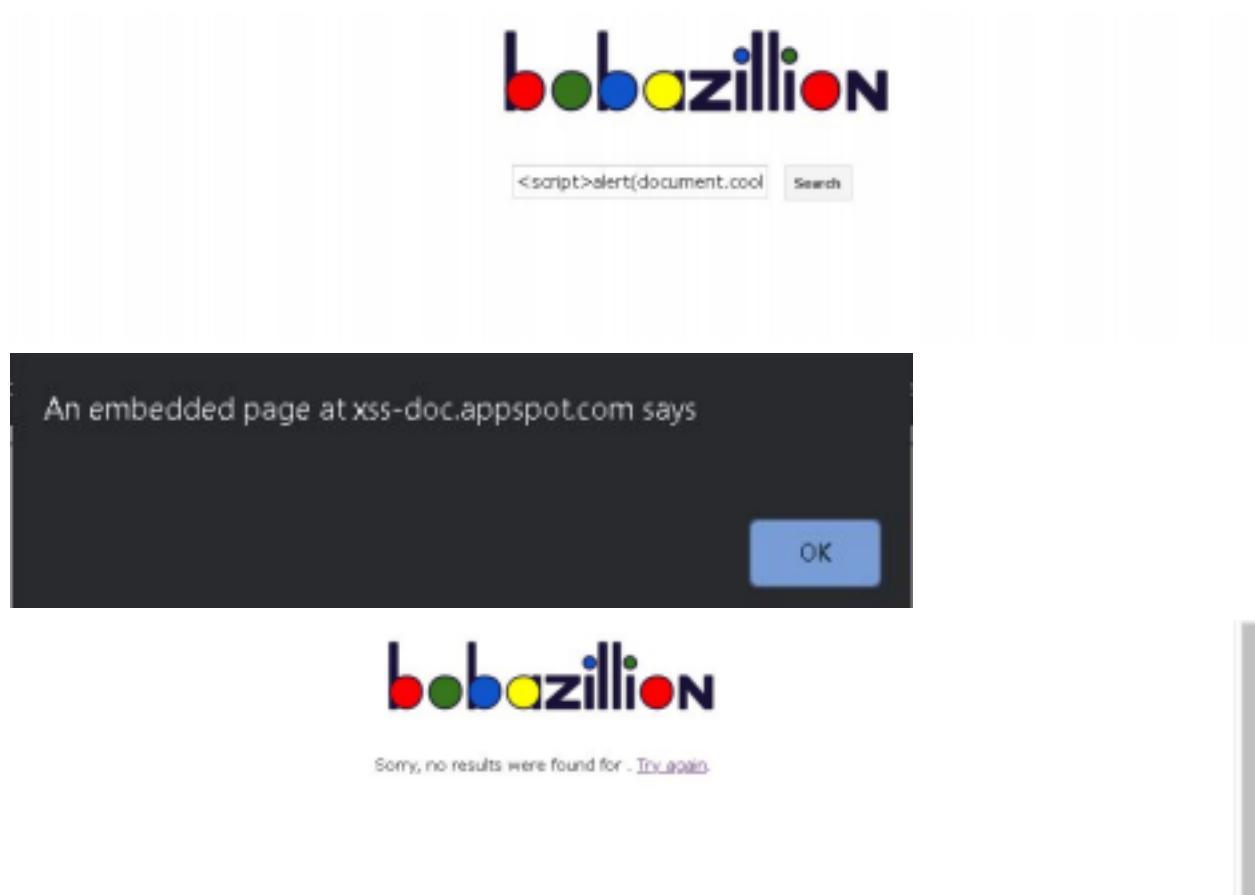

Sorry, no results were found for [vitap](#). [Try again.](#)

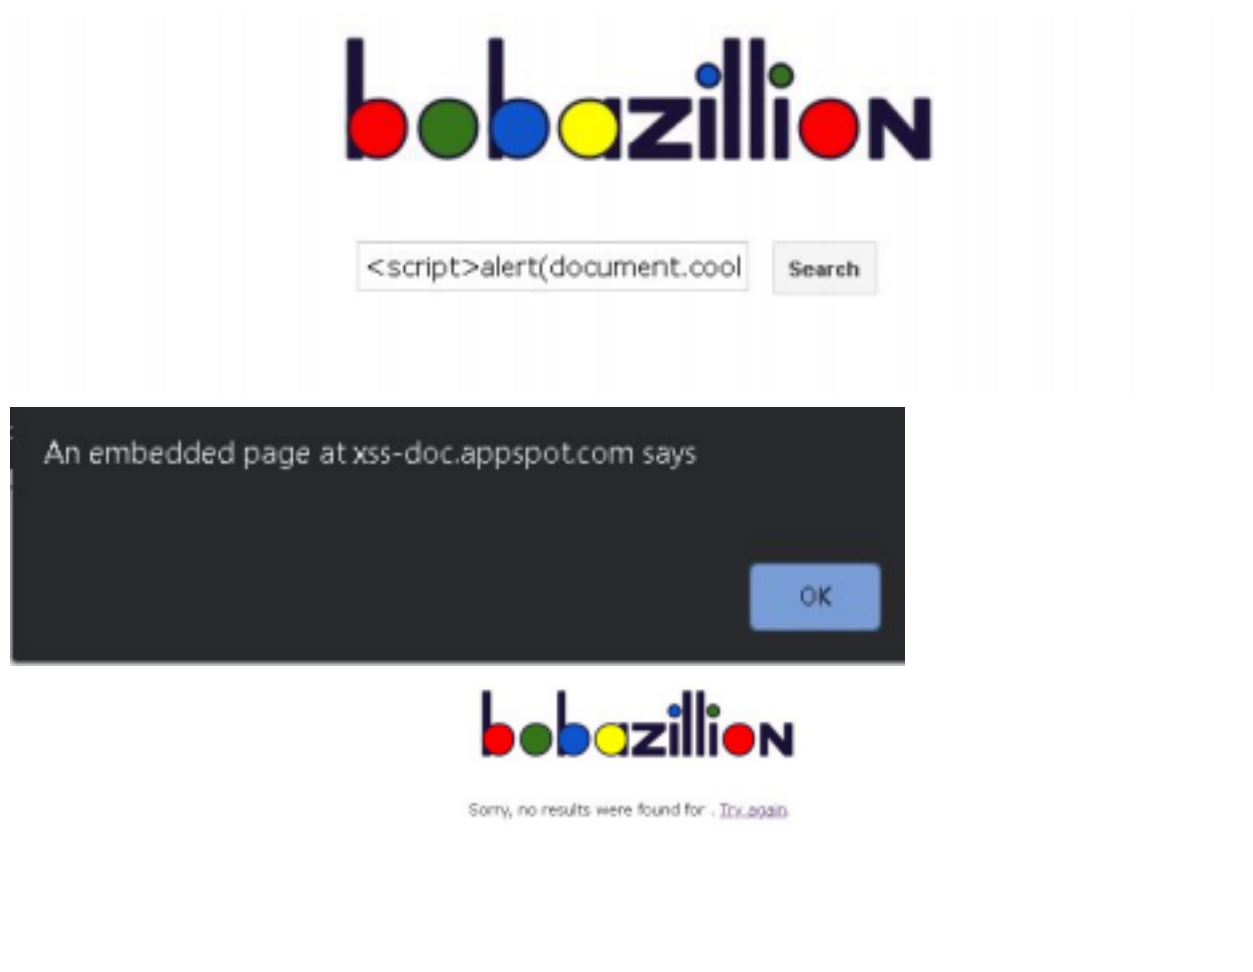

On clicking this site it will redirect you to given link

3.
Tryingtogetthecookies

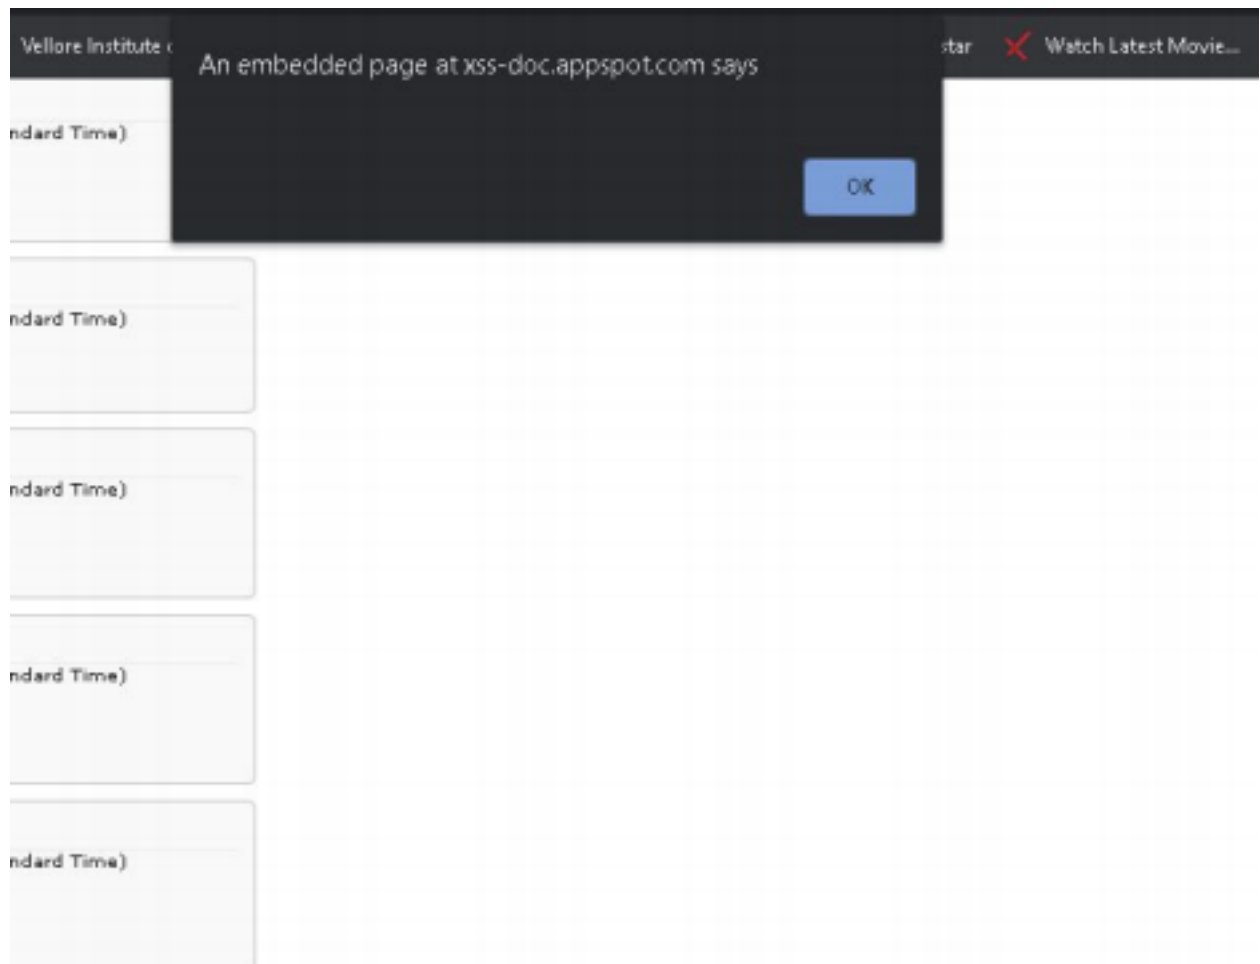

4.

To get the cookies from payload we are now using advanced level xss which gives us cookies

2. Stored XSS

It is not responding

3.Dom XSS

Hello, guest!

4. Challenge

alert(1) to win

The code below generates HTML in an unsafe way. Prove it by calling `alert(1)`.

```
function escape(s) {  
  return '<script>console.log(""+s+"");</script>';  
}
```

Input 12

Output **Win!**

```
<script>console.log("");alert(1,"");</script>
```
